

Planting Tips:

- Plant your food so there is no cross-fertilization
 - If food/plant cross you can't eat, reuse, or sell
- Make sure all your plants are accurately labeled.
 - Use full plan name.
 - If the plant goes to seed, you need to know what it is.
- Date when planted.
- Make a plot map.
- Plant Fall & Spring
 - New Compost or Mulch
- May/June
 - Reseed for summer flowers
- Every two weeks
 - Water with fish water
 - Everything fruiting should have a foliar feed
- Healthier plants=less seeds and less bugs
- BABYSIT your plants
- Seeds
 - Water twice a day until they sprout
 - Must be wet or they will die
- Dying plants
 - Bl
 - Epson Salt
 - Trim back
- Schedule foliar feed every two weeks.
- Checks seeds to plant Monthly
- Dry soil encourages plants to run to flower prematurely
- Soil that was manured for a previous crop and that's topped with a mulch of organic matter will stand a better chance at retaining that all-important soil moisture.
